

****🟢 BASIC Git Commands (Daily Usage)****

Purpose	Command	Notes
Initialize Git in a directory	git init	Creates .git folder
Check status	git status	See tracked/untracked/staged files
Add file to staging	git add file.txt	Add single file
Add all changes to staging	git add . or git add -A	Adds everything
Commit changes	git commit -m "Message"	Save snapshot
View commit history	git log / git log --oneline	Shows commit list
Check current branch	git branch	Shows local branches
Create a new branch	git branch feature-1	Only creates
Switch branch	git checkout feature-1 / git switch feature-1	Moves to that branch
Create + switch branch	git checkout -b new-branch	Shortcut
View differences	git diff	Shows unstaged changes
Push changes to GitHub	git push origin main	Uploads to remote
Pull latest from GitHub	git pull origin main	Downloads latest
Clone repository	git clone https://github.com/user/repo.git	Copy from GitHub

****🔧 INTERMEDIATE Git Commands (Team Workflow)****

Purpose	Command	Notes
View remote(s)	git remote -v	See URLs for origin
Add a remote repository	git remote add origin <url>	Link local to remote
Rename branch	git branch -m new-name	Rename local branch
Delete local branch	git branch -d branch-name	Only if merged
Delete remote branch	git push origin --delete branch-name	Use with caution
Stage part of a file	git add -p	Choose what to stage
Unstage a file	git reset HEAD file.txt	Keeps changes
Amend last commit	git commit --amend	Change message or add files

Show last commit	git show	View last commit details
Reset file to last commit	git checkout -- file.txt	Discards local changes
Revert a commit (undo safely)	git revert <commit-id>	Adds reverse commit
Create tag	git tag v1.0	Useful for releases
Push tags	git push origin --tags	Push all tags
Fetch without merging	git fetch	Update local info
Set upstream branch	git push -u origin branch-name	Links local to remote

**** 🚀 ADVANCED Git Commands (Power Use) ****

Purpose	Command	Notes
Interactive rebase	git rebase -i HEAD~3	Edit last 3 commits
Rebase a branch	git rebase main	Clean history before merge
Squash commits	Use rebase -i and choose squash	Combines commits
Stash current changes	git stash	Save work temporarily
Apply stashed changes	git stash apply	Bring back stashed code
List all stashes	git stash list	View stash stack
Delete stash	git stash drop / git stash clear	Remove stash
Remove file from Git (keep in folder)	git rm --cached file.txt	Untrack file
Remove file completely	git rm file.txt	Delete from disk and Git
Clean untracked files	git clean -f	Deletes untracked files
View file history	git log file.txt	Shows history of a file
Blame: who edited what	git blame file.txt	Shows line-by-line author
Check config	git config --list	View all configs
Set global username/email	git config --global user.name "Anil"	
	git config --global user.email "you@example.com"	Set identity
Git alias	git config --global alias.co checkout	Custom shortcuts

****🐙 GitHub-Specific Commands and Usage****

Task Tool / Command

Create repo on GitHub Web UI

Clone repo `git clone <URL>`

Fork a repo GitHub Web UI

Create pull request GitHub Web UI

Review code, assign reviewers GitHub Web UI

Merge pull request GitHub Web UI

Create GitHub Action workflow `.github/workflows/*.yml`

Use Issues for bugs/features GitHub Web UI

Use Projects for kanban-style planning GitHub Web UI

Enable branch protection GitHub Repo Settings

Add collaborators GitHub → Repo → Settings → Collaborators
